## Chapter 14 Problem $34{ }^{\dagger}$

## Given

$d=100 \mathrm{~m}$
$v=343 \mathrm{~m} / \mathrm{s}$

## Solution

Find the error in timing if going by the sound of the starter's gun.
The kinematic equation with no acceleration becomes

$$
d=v t
$$

Solving for $t$ gives

$$
t=\frac{d}{v}=\frac{(100 \mathrm{~m})}{(343 \mathrm{~m} / \mathrm{s})}=0.292 \mathrm{~s}
$$

The runners would have been moving for $0.292 s$ before the timer would start if he were at the finish line.
