## Chapter 2 Problem $37{ }^{\dagger}$

## Given

$t=4.4 \mathrm{~s}$
$a=-9.8 \mathrm{~m} / \mathrm{s}^{2}$
$v_{0}=0 \mathrm{~m} / \mathrm{s}$

## Solution

How deep is the well?
Use the following equation where acceleration is due to gravity.

$$
\begin{aligned}
& \Delta y=y-y_{0}=v_{0} t+\frac{1}{2} a t^{2} \\
& \Delta y=(0 \mathrm{~m} / \mathrm{s})(4.4 \mathrm{~s})+\frac{1}{2}(-9.8 \mathrm{~m} / \mathrm{s})(4.4 \mathrm{~s})^{2}=-94.9 \mathrm{~m}
\end{aligned}
$$

The negative value indicates that is is 95 m below the starting point.
