

Chapter 2 Problem 62 †

Given

$$a = -8 \text{ m/s}^2$$

$$v = 88 \text{ km/h}$$

$$\text{Distance between cars} = 85 \text{ m}$$

Solution

Will the cars collide. If not, how far apart will they be when they come to a stop.

First convert the velocity into m/s .

$$v = 88 \text{ km/h} \left(\frac{1 \text{ h}}{3600 \text{ s}} \right) \left(\frac{1000 \text{ m}}{1 \text{ km}} \right) = 24.4 \text{ m/s}$$

Next use the definition of acceleration to find the time for each car to come to a stop.

$$\bar{a} = \frac{\Delta v}{\Delta t}$$

$$\Delta t = \frac{\Delta v}{\bar{a}} = \frac{v_f - v_i}{\bar{a}} = \frac{0 \text{ m/s} - 24.4 \text{ m/s}}{-8.0 \text{ m/s}^2} = 3.05 \text{ s}$$

Assuming they don't collide, each car will travel the following distance

$$x = x_0 + v_0 t + \frac{1}{2} a t^2 = 0 \text{ m} + (24.4 \text{ m/s})(3.05 \text{ s}) + \frac{1}{2}(-8.0 \text{ m/s}^2)(3.05 \text{ s})^2 = 37.2 \text{ m}$$

An alternate method would be to use the kinematic equation that relates velocity to position.

$$x - x_0 = \frac{v^2 - v_0^2}{2a} = \frac{(0 \text{ m/s})^2 - (24.4 \text{ m/s})_0^2}{2(-8.0 \text{ m/s}^2)} = 37.2 \text{ m}$$

When they stop, the distance between the cars is

$$85 \text{ m} - 2(37.2 \text{ m}) = 10.6 \text{ m}$$

Plotting the distance between the two cars as a function of time gives.
